

MandarinOS Conversation Architecture — Locked Decisions v1

MandarinOS is designed as a Conversation Operating System rather than a traditional language course.

The goal is to teach learners how to keep conversations alive using curiosity, follow-up questions, topic transitions, and repair strategies rather than memorizing isolated vocabulary lists.

Core Product Idea

MandarinOS trains the operating system behind conversation. Fluent speakers do not know every word,

but they know how to keep conversations going. The system therefore focuses on conversation flow, question patterns, and natural topic navigation.

Conversation Architecture

Persona World → Conversation Steering Engine → Conversation Engines → Conversation Loops → Phrase Mastery.

Personas create a social world while topic engines provide structured learning.

Primary Conversation Engines

Identity

Place (Hub Engine)

Family

Study / Work

Travel

Food

Supporting Systems

Curiosity Engine — Generates natural follow-up questions.

Emergency Repair System — Allows learners to recover when vocabulary is insufficient.

Conversation Loop Engine — Ensures high-value phrases repeat across conversations.

Conversation Memory — Remembers facts about characters and the learner.

Conversation Steering — Maintains conversational energy and direction.

Learning Modes

Social Mode: Learners talk to characters in a simulated social world.

Drill Mode: Learners repeat useful phrases through structured loops and reset conversations.

Persona Network

Characters exist in a small social network so the learner gradually meets friends, family members, and colleagues of existing characters. This creates continuity and makes the language world feel alive.

Example Persona Network

Zhang Rui — University student in Shanghai

Liu Fang — Zhang Rui's older sister, finance professional

Wang Wei — Their father, engineer

Chen Wei — Wang Wei's colleague interested in entrepreneurship

Mei Lin — Liu Fang's friend who loves travel and food

Product Roadmap

Phase 1: Persona■based conversation training

Phase 2: Guided conversations with other learners using conversation prompts

Phase 3: MandarinOS conversation network connecting learners and native speakers
